Table of Contents

1. What are Beamer, Pandoc, and Markdown?
2. Markdown Syntax
 - 2.1 Headers
 - 2.2 Emphasis
 - 2.3 Lists
 - 2.4 Links
 - 2.5 Images
 - 2.6 Code and Syntax Highlighting
 - 2.7 Tables
 - 2.8 Blockquotes

What are Beamer, Pandoc, and Markdown?

- **Beamer**

Beamer is a LaTeX **document class** for creating presentation slides, with a wide range of templates and a set of features for making slideshow effects.

It supports pdfLaTeX, LaTeX + dvips, LuaLaTeX and XeLaTeX. The name is taken from the German word “Beamer” as a pseudo-anglicism for “video projector”.

What are Beamer, Pandoc, and Markdown?

- **Pandoc**

Pandoc is a free and open-source **document converter**, widely used as a writing tool (especially by scholars) and as a basis for publishing workflows. It was created by John MacFarlane, a philosophy professor at the University of California, Berkeley.

What are Beamer, Pandoc, and Markdown?

- **Markdown**

Markdown is a lightweight **markup language** with plain text formatting syntax. Its design allows it to be converted to many output formats, but the original tool by the same name only supports **HTML**. Markdown is often used to format readme files, for writing messages in online discussion forums, and to create rich text using a plain text editor.

Philosophy

Markdown is intended to be as easy-to-read and easy-to-write as is feasible.

Readability, however, is emphasized above all else. A markdown-formatted document should be publishable as-is, as plain text, without looking like it's been marked up with tags or formatting instructions.
